

***Cucurbita maxima* Rimu v2 Genome Data Release Policy**

PLEASE READ BEFORE ACCESSING THE PRE-PUBLICATION *CUCURBITA MAXIMA* RIMU V2 GENOME SEQUENCE DATA: We pleased to make available the pre-publication the *Cucurbita maxima* Rimu v2 genome sequence and annotation for use by public and private research communities as a resource to facilitate plant biology discoveries and plant breeding programs.

This pre-publication *Cucurbita maxima* Rimu v2 genome data is made available with the understanding that users will respect the rights of those who contributed to this effort to describe the genome in a peer-reviewed publication. By accessing these data, users agree not to publish any articles containing analyses of genes or genomic data on a whole genome or chromosome scale prior to publication of the genome. The restricted analyses include the identification of complete sets of genomic features such as genes, gene families, regulatory elements, repeat structures, etc., and whole-genome comparisons of regions of evolutionary conservation or change. Studies of any type on the reserved data sets that are not in direct competition with those planned may be undertaken following an agreement. Interested parties are encouraged to contact Dr. Zhangjun Fei (zf25@cornell.edu) to discuss such possibilities.
